- Stickers

## Let's show you around

## How it works

### Wired LAN View

## Wireless LAN View

## Internet View

LAN means Local Area Network

# Chapter 2: Let's get PC view

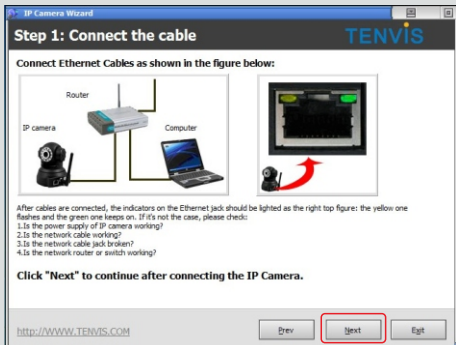

## For Windows

### Wired LAN View

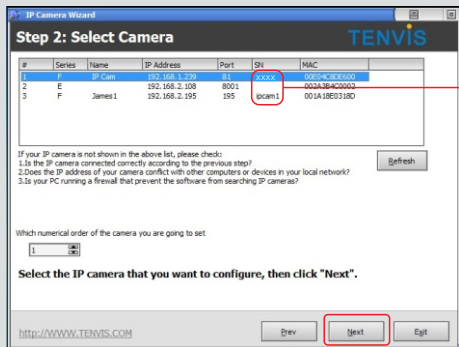

1. Insert the CD or download the software from [www.tennis.com/download](http://www.tennis.com/download).
2. Open the CD and use autorun to install. Then click .
3. After installation, please double click .
4. Open the wizard and select the installation mode. **Wizard Mode** is recommended for first time users or non-tech users. If you select the Advanced Mode, please visit [www.tennis.com/download](http://www.tennis.com/download) to find the **Advanced User Guide**.

5. Please make sure both the IP camera and your computer are connected with the wireless router.

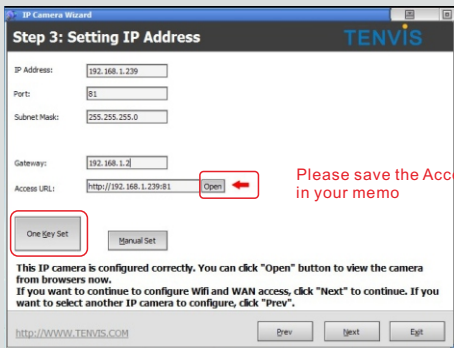

6. Search and select your camera.

IP ADD:HTTP://192.168.1.239:81  
 User: admin Pwd: <null>  
 S/N: xxxx  
 DDNS:http://xxxx.tenvis.info

You can find this label on the camera

7. Set the IP address of the camera. If a red arrow appears, it means you could visit your camera with your internal network through the browser. If not appear, please click **One Key Set**. If the red arrow still not appear, please contact us.

Please save the Access URL in your memo

Tips: IP Camera Web Server will detect the type of your browser and match the correct sign-in mode accordingly.

Please install the plug-in of the IE browser for the first time

If you can view the scene, congratulations! Now you can view the live video from your LAN.

 For the security, please update the default user name and password of your IP camera. The exact process is as below.

→ **System**

→ **Change Password**

If you only use wired LAN view, you could exit now.

## Wireless LAN View

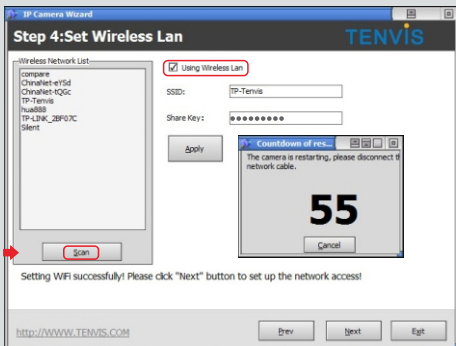

8. Please come back to the IP Camera Wizard page, fulfill the factory setting to continue.

IP ADD:HTTP://192.168.1.239:81  
User: admin Pwd: <null>  
S/N: xxxx  
DDNS:http://xxxx.tennis.info

You can find this label on the camera

9. Please make sure the **Using Wireless Lan** is checked if you want to enable WIFI. And then click the **Scan** button until you find your own wireless router ID. When the scanning is finished, please select your WIFI network, and enter the password in **Share Key** text box. Then click **Apply**. The camera will be restarting, and the network cable need to be disconnected.

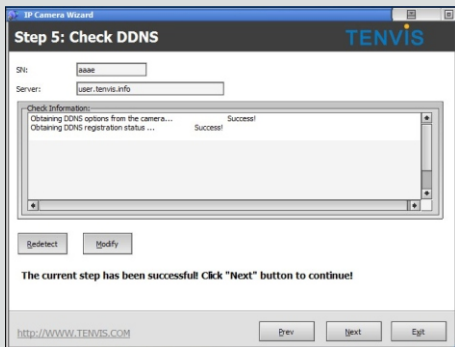

Please scan for multiple times!

**Now move back to your browser. If you can view the scene, congratulations! You have set the wireless successfully.**

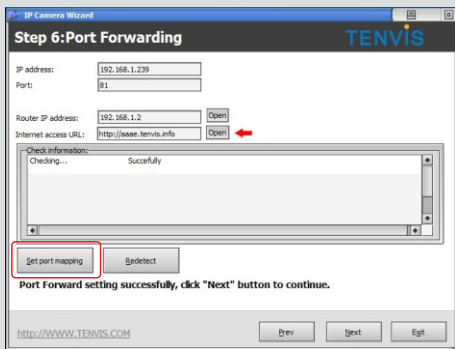

If you don't use internet, now you could exit the IP Camera Wizard.

## Internet View

10. If the DDNS checking succeed, please click **Next**. If failed, please recheck the Internet connecting. If still not connected, please contact your own Internet Service Provider.

11. If the port forwarding succeed, please click **Next**. If failed, please click **Set port forwarding**.

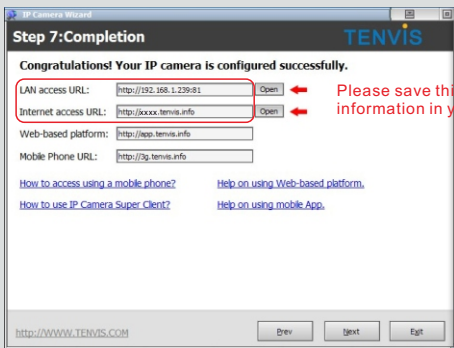

Please enter the router's username and password

Select your router brand, input the user name and password of your router, then click **OK**. If failed again, and the below 3 problems occur, please contact your Internet Service Provider or router provider.

- 1) You are not sure about the username or password.
- 2) You are not sure about your router brand;
- 3) You still can't set successful.

If you still have problem with port forwarding, please contact us by the support information on Page 19.

12. If succeed, below screen will show. If you want to add more cameras, please click **Next** and **Yes**.

Please save this important information in your memo

**Now move back to your browser. Input your internet access URL. If you can view the scene, Congratulations! You have finished Internet view setting successfully. Now you can monitor what is happening anywhere anytime from internet.**

## For Mac

1. Insert the CD or download the [www.tennis.com/download](http://www.tennis.com/download).

software from

2. Click

3. If you see the scene 1, please continue. If you see the scene 2, first skip to page 10 and modify the camera's IP address, and refresh to scene 1 to continue.

scene 1

scene 2

4. Double click the IP address listed in the search result window. Default browser will be opened automatically to display the camera login page.

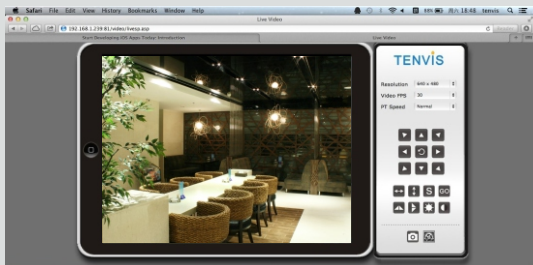

IP ADD:HTTP://192.168.1.239:81  
User: admin Pwd: <null>  
S/N: xxxx  
DDNS:http://xxxx.tennis.info

You can find this label on the camera

 DDNS: http://xxxx.tennis.info

You can find the label on the cameras

6. Select **Single Channel** to view camera from Internet.

**Congratulations! You have finished internet view successfully, now you can view the live video from your phone.**

# Chapter 5: Last, but not least

## FAQ

### 1. Why my computer or security software said the software is dangerous and it is a virus?

The wizard will detect device in your network, and it seems like a virus. Please ignore the warning and continue.

### 2. Why the wizard could not detect the camera?

Please make sure the network cable is in normal and turn off firewall and security software in your computer.

### 3. Why the wizard said The camera can not be accessed , please choose one key set or manual setting after we already done One key set and Manual setting?

Please connect the camera to your router or ADSL router, and **DO NOT** connect it to your PC directly.

### 4. Why the camera always ask username and password , or it said Incorrect User?

The camera's default username is **admin**, and please leave password blank. If you forget your username or password, you could reset the camera to factory settings to get the default username and password.

### 5. How can I reset the camera to factory settings?

Please press the reset button under or on the camera about 1 minute until the camera reboot. Please make sure the power supply is connected to the camera when you are doing it.

### 6. Why there is no audio and video from the camera (Only indoor camera support audio)?

No audio: Please sign in ActiveX mode for IE or VLC mode for all web browsers.  
No video: IE does not support Server Push mode and other web browser does not support ActiveX mode, please login the correct mode for video. TENVIS mobile application support video but not support audio, you could find some 3rd party application support audio for TENVIS IP camera.

### 7. Why the image is blurry?

Please tear down the preservative on the lens and rotate the lens of the camera if you could get clear image.

## 8. Why the camera could not pan/tilt properly?

Maybe the camera is stuck. Please rotate its head manually to fix it.

## 9. Why the camera always lost wireless connection?

Please tighten the antenna of the camera. Make sure it is not far away from the router and there is no big barrier between the camera and the router.

## 10. The comparison of different browsers.

	IE	Firefox, Chrome, Safari in all platform
Video	Yes	Yes
Record	Yes	No
Alarm Record	Yes(Only in live video page)	No
Alarm by E-mail or FTP	Yes	Yes
Multiple View	Yes	No
Audio	2 Way	No
