

CY96610 series is based on Cypress advanced F<sup>2</sup>MC-16FX architecture (16-bit with instruction pipeline for RISC-like performance). The CPU uses the same instruction set as the established F<sup>2</sup>MC-16LX family thus allowing for easy migration of F<sup>2</sup>MC-16LX Software to the new F<sup>2</sup>MC-16FX products. F<sup>2</sup>MC-16FX product improvements compared to the previous generation include significantly improved performance - even at the same operation frequency, reduced power consumption and faster start-up time. For high processing speed at optimized power consumption an internal PLL can be selected to supply the CPU with up to 32MHz operation frequency from an external 4MHz to 8MHz resonator. The result is a minimum instruction cycle time of 31.2ns going together with excellent EMI behavior. The emitted power is minimized by the on-chip voltage regulator that reduces the internal CPU voltage. A flexible clock tree allows selecting suitable operation frequencies for peripheral resources independent of the CPU speed.

## Features

### Technology

- 0.18µm CMOS

### CPU

- F<sup>2</sup>MC-16FX CPU
- Optimized instruction set for controller applications (bit, byte, word and long-word data types, 23 different addressing modes, barrel shift, variety of pointers)
- 8-byte instruction queue
- Signed multiply (16-bit × 16-bit) and divide (32-bit/16-bit) instructions available

### System Clock

- On-chip PLL clock multiplier (×1 to ×8, ×1 when PLL stop)
- 4MHz to 8MHz crystal oscillator (maximum frequency when using ceramic resonator depends on Q-factor)
- Up to 8MHz external clock for devices with fast clock input feature
- 32.768kHz subsystem quartz clock
- 100kHz/2MHz internal RC clock for quick and safe startup, clock stop detection function, watchdog
- Clock source selectable from mainclock oscillator, subclock oscillator and on-chip RC oscillator, independently for CPU and 2 clock domains of peripherals
- The subclock oscillator is enabled by the Boot ROM program controlled by a configuration marker after a Power or External reset
- Low Power Consumption - 13 operating modes (different Run, Sleep, Timer, Stop modes)

### On-Chip Voltage Regulator

- Internal voltage regulator supports a wide MCU supply voltage range (Min=2.7V), offering low power consumption

### Low Voltage Detection Function

- Reset is generated when supply voltage falls below programmable reference voltage

### Code Security

- Protects Flash Memory content from unintended read-out

### DMA

- Automatic transfer function independent of CPU, can be assigned freely to resources

### Interrupts

- Fast Interrupt processing
- 8 programmable priority levels
- Non-Maskable Interrupt (NMI)

### CAN

- Supports CAN protocol version 2.0 part A and B
- ISO16845 certified
- Bit rates up to 1Mbps
- 32 message objects
- Each message object has its own identifier mask
- Programmable FIFO mode (concatenation of message objects)
- Maskable interrupt
- Disabled Automatic Retransmission mode for Time Triggered CAN applications
- Programmable loop-back mode for self-test operation

### USART

- Full duplex USARTs (SCI/LIN)
- Wide range of baud rate settings using a dedicated reload timer
- Special synchronous options for adapting to different synchronous serial protocols

- LIN functionality working either as master or slave LIN device
- Extended support for LIN-Protocol to reduce interrupt load

### A/D Converter

- SAR-type
- 8/10-bit resolution
- Signals interrupt on conversion end, single conversion mode, continuous conversion mode, stop conversion mode, activation by software, external trigger, reload timers and PPGs
- Range Comparator Function

### Source Clock Timers

- Three independent clock timers (23-bit RC clock timer, 23-bit Main clock timer, 17-bit Sub clock timer)

### Hardware Watchdog Timer

- Hardware watchdog timer is active after reset
- Window function of Watchdog Timer is used to select the lower window limit of the watchdog interval

### Reload Timers

- 16-bit wide
- Prescaler with  $1/2^1$ ,  $1/2^2$ ,  $1/2^3$ ,  $1/2^4$ ,  $1/2^5$ ,  $1/2^6$  of peripheral clock frequency
- Event count function

### Free-Running Timers

- Signals an interrupt on overflow, supports timer clear upon match with Output Compare (0, 4)
- Prescaler with 1,  $1/2^1$ ,  $1/2^2$ ,  $1/2^3$ ,  $1/2^4$ ,  $1/2^5$ ,  $1/2^6$ ,  $1/2^7$ ,  $1/2^8$  of peripheral clock frequency

### Input Capture Units

- 16-bit wide
- Signals an interrupt upon external event
- Rising edge, Falling edge or Both (rising & falling) edges sensitive

### Output Compare Units

- 16-bit wide
- Signals an interrupt when a match with Free-running Timer occurs
- A pair of compare registers can be used to generate an output signal

### Programmable Pulse Generator

- 16-bit down counter, cycle and duty setting registers
- Can be used as 2 ×8-bit PPG
- Interrupt at trigger, counter borrow and/or duty match
- PWM operation and one-shot operation

- Internal prescaler allows 1, 1/4, 1/16, 1/64 of peripheral clock as counter clock or of selected Reload timer underflow as clock input
- Can be triggered by software or reload timer
- Can trigger ADC conversion
- Timing point capture

### Quadrature Position/Revolution Counter (QPRC)

- Up/down count mode, Phase difference count mode, Count mode with direction
- 16-bit position counter
- 16-bit revolution counter
- Two 16-bit compare registers with interrupt
- Detection edge of the three external event input pins AIN, BIN and ZIN is configurable

### Real Time Clock

- Operational on main oscillation (4MHz), sub oscillation (32kHz) or RC oscillation (100kHz/2MHz)
- Capable to correct oscillation deviation of Sub clock or RC oscillator clock (clock calibration)
- Read/write accessible second/minute/hour registers
- Can signal interrupts every half second/second/minute/hour/day
- Internal clock divider and prescaler provide exact 1s clock

### External Interrupts

- Edge or Level sensitive
- Interrupt mask bit per channel
- Each available CAN channel RX has an external interrupt for wake-up
- Selected USART channels SIN have an external interrupt for wake-up

### Non Maskable Interrupt

- Disabled after reset, can be enabled by Boot-ROM depending on ROM configuration block
- Once enabled, can not be disabled other than by reset
- High or Low level sensitive
- Pin shared with external interrupt 0

### I/O Ports

- Most of the external pins can be used as general purpose I/O
- All push-pull outputs
- Bit-wise programmable as input/output or peripheral signal
- Bit-wise programmable input enable
- One input level per GPIO-pin (either Automotive or CMOS hysteresis)
- Bit-wise programmable pull-up resistor

**Built-in On Chip Debugger (OCD)**

- One-wire debug tool interface
- Break function:
  - Hardware break: 6 points (shared with code event)
  - Software break: 4096 points
- Event function
  - Code event: 6 points (shared with hardware break)
  - Data event: 6 points
  - Event sequencer: 2 levels + reset
- Execution time measurement function
- Trace function: 42 branches
- Security function

**Flash Memory**

- Dual operation flash allowing reading of one Flash bank while programming or erasing the other bank
- Command sequencer for automatic execution of programming algorithm and for supporting DMA for programming of the Flash Memory
- Supports automatic programming, Embedded Algorithm
- Write/Erase/Erase-Suspend/Resume commands
- A flag indicating completion of the automatic algorithm
- Erase can be performed on each sector individually
- Sector protection
- Flash Security feature to protect the content of the Flash
- Low voltage detection during Flash erase or write

## 1. Product Lineup

Features		CY96610	Remark
Product Type		Flash Memory Product	
Subclock		Subclock can be set by software	
Dual Operation Flash Memory	RAM	-	
32.5KB + 32KB	4KB	CY96F612R, CY96F612A	Product Options R: MCU with CAN A: MCU without CAN
64.5KB + 32KB	10KB	CY96F613R, CY96F613A	
128.5KB + 32KB	10KB	CY96F615R, CY96F615A	
Package		LQFP-48 LQA048	
DMA		2ch	
USART		3ch	LIN-USART 2/7/8
	with automatic LIN-Header transmission/reception	Yes (only 1ch)	LIN-USART 2
	with 16 byte RX- and TX-FIFO	No	
8/10-bit A/D Converter		16ch	AN 0/1/3/4/6 to 10/ 12/14/16/24/25/30/31
	with Data Buffer	No	
	with Range Comparator	Yes	
	with Scan Disable	No	
	with ADC Pulse Detection	No	
16-bit Reload Timer (RLT)		3ch	RLT 1/3/6
16-bit Free-Running Timer (FRT)		4ch	FRT 0 to 3 FRT 0 to 3 does not have external clock input pin
16-bit Input Capture Unit (ICU)		7ch (3 channels for LIN-USART)	ICU 0/1/4 to 6/9/10 (ICU 6/9/10 for LIN-USART)
16-bit Output Compare Unit (OCU)		5ch	OCU 0/1/4/6/7 (OCU 4 for FRT clear)
8/16-bit Programmable Pulse Generator (PPG)		8ch (16-bit) / 16ch (8-bit)	PPG 0/1/3/4/6/7/12/14
	with Timing point capture	Yes	
	with Start delay	No	
	with Ramp	No	
Quadrature Position/Revolution Counter (QPRC)		2ch	QPRC 0/1
CAN Interface		1ch	CAN 2 32 Message Buffers
External Interrupts (INT)		11ch	INT 0/2/3/4/7 to 13
Non-Maskable Interrupt (NMI)		1ch	
Real Time Clock (RTC)		1ch	
I/O Ports		35 (Dual clock mode) 37 (Single clock mode)	
Clock Calibration Unit (CAL)		1ch	
Clock Output Function		2ch	
Low Voltage Detection Function		Yes	Low voltage detection function can be disabled by software
Hardware Watchdog Timer		Yes	
On-chip RC-oscillator		Yes	
On-chip Debugger		Yes	

**Note:**

- All signals of the peripheral function in each product cannot be allocated by limiting the pins of package. It is necessary to use the port relocate function of the general I/O port according to your function use.

## 2. Block Diagram

### 3. Pin Assignment

## 4. Pin Description

Pin Name	Feature	Description
ADTG_R	ADC	Relocated A/D converter trigger input pin
AINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin
ANn	ADC	A/D converter channel n input pin
AVcc	Supply	Analog circuits power supply pin
AVRH	ADC	A/D converter high reference voltage input pin
AVss	Supply	Analog circuits power supply pin
BINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin
C	Voltage regulator	Internally regulated power supply stabilization capacitor pin
CKOTn	Clock Output function	Clock Output function n output pin
CKOTn_R	Clock Output function	Relocated Clock Output function n output pin
CKOTXn	Clock Output function	Clock Output function n inverted output pin
DEBUG I/F	OCD	On Chip Debugger input/output pin
INn	ICU	Input Capture Unit n input pin
INTn	External Interrupt	External Interrupt n input pin
INTn_R	External Interrupt	Relocated External Interrupt n input pin
INTn_R1	External Interrupt	Relocated External Interrupt n input pin
MD	Core	Input pin for specifying the operating mode
NMI	External Interrupt	Non-Maskable Interrupt input pin
OUTn	OCU	Output Compare Unit n waveform output pin
OUTn_R	OCU	Relocated Output Compare Unit n waveform output pin
Pnn_m	GPIO	General purpose I/O pin
PPGn	PPG	Programmable Pulse Generator n output pin (16bit/8bit)
PPGn_B	PPG	Programmable Pulse Generator n output pin (16bit/8bit)
RSTX	Core	Reset input pin
RXn	CAN	CAN interface n RX input pin
SCKn	USART	USART n serial clock input/output pin
SCKn_R	USART	Relocated USART n serial clock input/output pin
SINn	USART	USART n serial data input pin
SINn_R	USART	Relocated USART n serial data input pin
SOTn	USART	USART n serial data output pin
SOTn_R	USART	Relocated USART n serial data output pin
TINn	Reload Timer	Reload Timer n event input pin
TOTn	Reload Timer	Reload Timer n output pin
TTGn	PPG	Programmable Pulse Generator n trigger input pin
TXn	CAN	CAN interface n TX output pin
V <sub>cc</sub>	Supply	Power supply pin
V <sub>ss</sub>	Supply	Power supply pin
X0	Clock	Oscillator input pin
X0A	Clock	Subclock Oscillator input pin
X1	Clock	Oscillator output pin
X1A	Clock	Subclock Oscillator output pin

Pin Name	Feature	Description
ZINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin

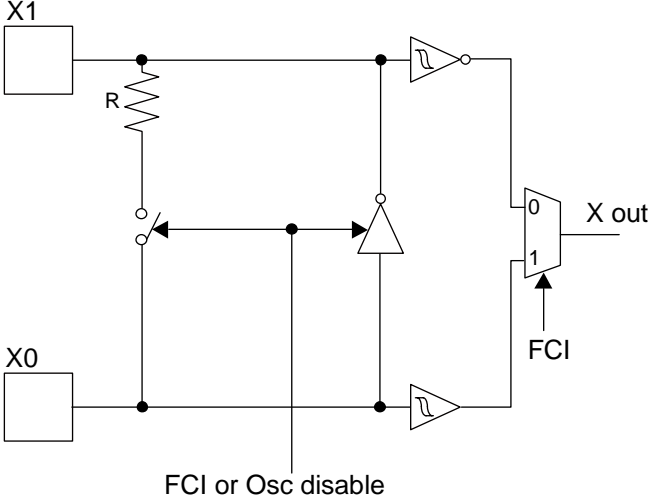

## 5. Pin Circuit Type

Pin No.	I/O Circuit Type*	Pin Name
1	Supply	AVss
2	G	AVRH
3	K	P06_3 / AN3 / PPG3
4	K	P06_4 / AN4 / PPG4
5	K	P06_6 / AN6 / PPG6
6	K	P06_7 / AN7 / PPG7
7	I	P05_0 / AN8 / SIN2 / INT3_R1
8	K	P05_1 / AN9 / SOT2
9	I	P05_2 / AN10 / SCK2
10	K	P05_4 / AN12 / TOT3 / INT2_R
11	K	P05_6 / AN14 / INT4_R
12	K	P07_0 / AN16 / INT0 / NMI
13	B	P04_0 / X0A
14	B	P04_1 / X1A
15	C	MD
16	H	P17_0
17	O	DEBUG I/F
18	M	P00_0 / INT8 / SCK7_R / PPG0_B
19	H	P00_1 / INT9 / SOT7_R / PPG1_B
20	M	P00_2 / INT10 / SIN7_R
21	H	P00_4 / INT12 / SOT8_R / PPG12_B
22	M	P00_5 / INT13 / SIN8_R / PPG14_B
23	M	P00_3 / INT11 / SCK8_R / PPG3_B
24	H	P01_0 / TIN1 / CKOT1 / OUT0_R
25	H	P01_1 / TOT1 / CKOTX1 / OUT1_R
26	H	P01_4 / PPG4_B
27	M	P01_5 / SIN2_R / INT7_R
28	H	P01_6 / SOT2_R / PPG6_B
29	M	P01_7 / SCK2_R / PPG7_B
30	H	P02_0 / PPG12 / CKOT1_R
31	H	P02_2 / ZIN0 / PPG14 / CKOT0_R
32	H	P02_4 / AIN0 / IN0 / TTG0

Pin No.	I/O Circuit Type*	Pin Name
33	C	RSTX
34	A	X1
35	A	X0
36	Supply	Vss
37	Supply	Vcc
38	F	C
39	H	P02_5 / BIN0 / IN1 / TTG1 / ADTG_R
40	K	P03_0 / AIN1 / IN4 / TTG4 / TTG12 / AN24
41	K	P03_1 / BIN1 / IN5 / TTG5 / TTG13 / AN25
42	M	P03_2 / INT10_R / RX2
43	H	P03_3 / TX2
44	K	P03_6 / ZIN1 / OUT6 / AN30
45	K	P03_7 / OUT7 / AN31
46	K	P06_0 / AN0 / PPG0
47	K	P06_1 / AN1 / PPG1
48	Supply	AVcc

\*: See [I/O Circuit Type](#) for details on the I/O circuit types.

### 6. I/O Circuit Type

Type	Circuit	Remarks
A		<p>High-speed oscillation circuit:</p> <ul style="list-style-type: none"> <li>■ Programmable between oscillation mode (external crystal or resonator connected to X0/X1 pins) and Fast external Clock Input (FCI) mode (external clock connected to X0 pin)</li> <li>■ Feedback resistor = approx. 1.0MΩ</li> <li>■ The amplitude: 1.8V±0.15V to operate by the internal supply voltage</li> </ul>

Type	Circuit	Remarks
B		<p>Low-speed oscillation circuit shared with GPIO functionality:</p> <ul style="list-style-type: none"> <li>■ Feedback resistor = approx. 5.0MΩ</li> <li>■ GPIO functionality selectable (CMOS level output (<math>I_{OL} = 4mA</math>, <math>I_{OH} = -4mA</math>), Automotive input with input shutdown function and programmable pull-up resistor)</li> </ul>

Type	Circuit	Remarks
C		<p>CMOS hysteresis input pin</p>
F		<p>Power supply input protection circuit</p>
G		<ul style="list-style-type: none"> <li>■ A/D converter ref+ (AVRH) power supply input pin with protection circuit</li> <li>■ Without protection circuit against <math>V_{CC}</math> for pins AVRH</li> </ul>
H		<ul style="list-style-type: none"> <li>■ CMOS level output</li> <li>■ (<math>I_{OL} = 4mA, I_{OH} = -4mA</math>)</li> <li>■ Automotive input with input shutdown function</li> <li>■ Programmable pull-up resistor</li> </ul>

Type	Circuit	Remarks
I		<ul style="list-style-type: none"> <li>■ CMOS level output</li> <li>■ (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>■ CMOS hysteresis input with input shutdown function</li> <li>■ Programmable pull-up resistor</li> <li>■ Analog input</li> </ul>
K		<ul style="list-style-type: none"> <li>■ CMOS level output</li> <li>■ (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>■ Automotive input with input shutdown function</li> <li>■ Programmable pull-up resistor</li> <li>■ Analog input</li> </ul>
M		<ul style="list-style-type: none"> <li>■ CMOS level output</li> <li>■ (<math>I_{OL} = 4\text{mA}</math>, <math>I_{OH} = -4\text{mA}</math>)</li> <li>■ CMOS hysteresis input with input shutdown function</li> <li>■ Programmable pull-up resistor</li> </ul>

Type	Circuit	Remarks
O		<ul style="list-style-type: none"> <li>■ Open-drain I/O</li> <li>■ Output 25mA, V<sub>cc</sub> = 2.7V</li> <li>■ TTL input</li> </ul>

## 7. Memory Map

FF:FFFF <sub>H</sub>	USER ROM* <sup>1</sup>
DE:0000 <sub>H</sub> DD:FFFF <sub>H</sub>	Reserved
10:0000 <sub>H</sub>	Boot-ROM

00:00F0 <sub>H</sub>	Reserved
00:0000 <sub>H</sub>	Peripheral

\*1: For details about USER ROM area, see “User ROM Memory Map for Flash Devices” on the following pages.

\*2: For RAMSTART addresses, see the table on the next page.

\*3: Unused GPR banks can be used as RAM area.

GPR: General-Purpose Register

The DMA area is only available if the device contains the corresponding resource.

The available RAM and ROM area depends on the device.

## 8. RAMstart Addresses

Devices	Bank 0 RAM Size	RAMSTART0
CY96F612	4KB	00:7200 <sub>H</sub>
CY96F613, CY96F615	10KB	00:5A00 <sub>H</sub>

### 9. User ROM Memory Map for Flash Devices

		CY96F612	CY96F613	CY96F615					
CPU mode address	Flash memory mode address	Flash size 32.5KB + 32KB	Flash size 64.5KB + 32KB	Flash size 128.5KB + 32KB					
FF:FFFF <sub>H</sub>	3F:FFFF <sub>H</sub>	SA39 - 32KB	SA39 - 64KB	SA39 - 64KB	Bank A of Flash A				
FF:8000 <sub>H</sub>	3F:8000 <sub>H</sub>								
FF:7FFF <sub>H</sub>	3F:7FFF <sub>H</sub>								
FF:0000 <sub>H</sub>	3F:0000 <sub>H</sub>

DF:0000 <sub>H</sub>	1F:0000 <sub>H</sub>								
DE:FFFF <sub>H</sub>		Reserved	Reserved	Reserved					
DE:0000 <sub>H</sub>									

\*: Physical address area of SAS-512B is from DF:0000<sub>H</sub> to DF:01FF<sub>H</sub>.

Others (from DF:0200<sub>H</sub> to DF:1FFF<sub>H</sub>) is mirror area of SAS-512B.

Sector SAS contains the ROM configuration block RCBA at CPU address DF:0000<sub>H</sub> -DF:01FF<sub>H</sub>.

SAS can not be used for E<sup>2</sup>PROM emulation.

## 10. Serial Programming Communication Interface

USART pins for Flash serial programming (MD = 0, DEBUG I/F = 0, Serial Communication mode)

CY96610		
Pin Number	USART Number	Normal Function
7	USART2	SIN2
8		SOT2
9		SCK2
20	USART7	SIN7_R
19		SOT7_R
18		SCK7_R
22	USART8	SIN8_R
21		SOT8_R
23		SCK8_R

### 11. Interrupt Vector Table

Vector Number	Offset in Vector Table	Vector Name	Cleared by DMA	Index in ICR to Program	Description
0	3FC <sub>H</sub>	CALLV0	No	-	CALLV instruction
1	3F8 <sub>H</sub>	CALLV1	No	-	CALLV instruction
2	3F4 <sub>H</sub>	CALLV2	No	-	CALLV instruction
3	3F0 <sub>H</sub>	CALLV3	No	-	CALLV instruction
4	3EC <sub>H</sub>	CALLV4	No	-	CALLV instruction
5	3E8 <sub>H</sub>	CALLV5	No	-	CALLV instruction
6	3E4 <sub>H</sub>	CALLV6	No	-	CALLV instruction
7	3E0 <sub>H</sub>	CALLV7	No	-	CALLV instruction
8	3DC <sub>H</sub>	RESET	No	-	Reset vector
9	3D8 <sub>H</sub>	INT9	No	-	INT9 instruction
10	3D4 <sub>H</sub>	EXCEPTION	No	-	Undefined instruction execution
11	3D0 <sub>H</sub>	NMI	No	-	Non-Maskable Interrupt
12	3CC <sub>H</sub>	DLY	No	12	Delayed Interrupt
13	3C8 <sub>H</sub>	RC_TIMER	No	13	RC Clock Timer

## 12. Handling Precautions

Any semiconductor devices have inherently a certain rate of failure. The possibility of failure is greatly affected by the conditions in which they are used (circuit conditions, environmental conditions, etc.). This page describes precautions that must be observed to minimize the chance of failure and to obtain higher reliability from your Cypress semiconductor devices.

### 12.1 Precautions for Product Design

This section describes precautions when designing electronic equipment using semiconductor devices.

#### ■ Absolute Maximum Ratings

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of certain established limits, called absolute maximum ratings. Do not exceed these ratings.

#### ■ Recommended Operating Conditions

Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their sales representative beforehand.

#### ■ Processing and Protection of Pins

These precautions must be followed when handling the pins which connect semiconductor devices to power supply and input/output functions.

##### 1. Preventing Over-Voltage and Over-Current Conditions

Exposure to voltage or current levels in excess of maximum ratings at any pin is likely to cause deterioration within the device, and in extreme cases leads to permanent damage of the device. Try to prevent such overvoltage or over-current conditions at the design stage.

##### 2. Protection of Output Pins

Shorting of output pins to supply pins or other output pins, or connection to large capacitance can cause large current flows. Such conditions if present for extended periods of time can damage the device. Therefore, avoid this type of connection.

##### 3. Handling of Unused Input Pins

Unconnected input pins with very high impedance levels can adversely affect stability of operation. Such pins should be connected through an appropriate resistance to a power supply pin or ground pin.

#### ■ Latch-up

Semiconductor devices are constructed by the formation of P-type and N-type areas on a substrate. When subjected to abnormally high voltages, internal parasitic PNP junctions (called thyristor structures) may be formed, causing large current levels in excess of several hundred mA to flow continuously at the power supply pin. This condition is called latch-up.

**CAUTION:**

*The occurrence of latch-up not only causes loss of reliability in the semiconductor device, but can cause injury or damage from high heat, smoke or flame. To prevent this from happening, do the following:*

- 1. Be sure that voltages applied to pins do not exceed the absolute maximum ratings. This should include attention to abnormal noise, surge levels, etc.*
- 2. Be sure that abnormal current flows do not occur during the power-on sequence.*

**■ Observance of Safety Regulations and Standards**

Most countries in the world have established standards and regulations regarding safety, protection from electromagnetic interference, etc. Customers are requested to observe applicable regulations and standards in the design of products.

**■ Fail-Safe Design**

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

**■ Precautions Related to Usage of Devices**

Cypress semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

**CAUTION:**

*Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.*

**12.2 Precautions for Package Mounting**

Package mounting may be either lead insertion type or surface mount type. In either case, for heat resistance during soldering, you should only mount under Cypress's recommended conditions. For detailed information about mount conditions, contact your sales representative.

**■ Lead Insertion Type**

Mounting of lead insertion type packages onto printed circuit boards may be done by two methods: direct soldering on the board, or mounting by using a socket.

Direct mounting onto boards normally involves processes for inserting leads into through-holes on the board and using the flow soldering (wave soldering) method of applying liquid solder. In this case, the soldering process usually causes leads to be subjected to thermal stress in excess of the absolute ratings for storage temperature. Mounting processes should conform to Cypress recommended mounting conditions.

If socket mounting is used, differences in surface treatment of the socket contacts and IC lead surfaces can lead to contact deterioration after long periods. For this reason it is recommended that the surface treatment of socket contacts and IC leads be verified before mounting.

#### ■ Surface Mount Type

Surface mount packaging has longer and thinner leads than lead-insertion packaging, and therefore leads are more easily deformed or bent. The use of packages with higher pin counts and narrower pin pitch results in increased susceptibility to open connections caused by deformed pins, or shorting due to solder bridges.

You must use appropriate mounting techniques. Cypress recommends the solder reflow method, and has established a ranking of mounting conditions for each product. Users are advised to mount packages in accordance with Cypress ranking of recommended conditions.

#### ■ Lead-Free Packaging

##### **CAUTION:**

*When ball grid array (BGA) packages with Sn-Ag-Cu balls are mounted using Sn-Pb eutectic soldering, junction strength may be reduced under some conditions of use.*

#### ■ Storage of Semiconductor Devices

Because plastic chip packages are formed from plastic resins, exposure to natural environmental conditions will cause absorption of moisture. During mounting, the application of heat to a package that has absorbed moisture can cause surfaces to peel, reducing moisture resistance and causing packages to crack. To prevent, do the following:

1. Avoid exposure to rapid temperature changes, which cause moisture to condense inside the product. Store products in locations where temperature changes are slight.
2. Use dry boxes for product storage. Products should be stored below 70% relative humidity, and at temperatures between 5°C and 30°C. When you open Dry Package that recommends humidity 40% to 70% relative humidity.
3. When necessary, Cypress packages semiconductor devices in highly moisture-resistant aluminum laminate bags, with a silica gel desiccant. Devices should be sealed in their aluminum laminate bags for storage.
4. Avoid storing packages where they are exposed to corrosive gases or high levels of dust.

#### ■ Baking

Packages that have absorbed moisture may be de-moisturized by baking (heat drying). Follow the Cypress recommended conditions for baking.

Condition: 125°C/24 h

#### ■ Static Electricity

Because semiconductor devices are particularly susceptible to damage by static electricity, you must take the following precautions:

1. Maintain relative humidity in the working environment between 40% and 70%. Use of an apparatus for ion generation may be needed to remove electricity.
2. Electrically ground all conveyors, solder vessels, soldering irons and peripheral equipment.
3. Eliminate static body electricity by the use of rings or bracelets connected to ground through high resistance (on the level of 1 MΩ). Wearing of conductive clothing and shoes, use of conductive floor mats and other measures to minimize shock loads is recommended.
4. Ground all fixtures and instruments, or protect with anti-static measures.
5. Avoid the use of styro foam or other highly static-prone materials for storage of completed board assemblies.

### 12.3 Precautions for Use Environment

Reliability of semiconductor devices depends on ambient temperature and other conditions as described above.

For reliable performance, do the following:

1. Humidity

Prolonged use in high humidity can lead to leakage in devices as well as printed circuit boards. If high humidity levels are anticipated, consider anti-humidity processing.

2. Discharge of Static Electricity

When high-voltage charges exist close to semiconductor devices, discharges can cause abnormal operation. In such cases, use anti-static measures or processing to prevent discharges.

3. Corrosive Gases, Dust, or Oil

Exposure to corrosive gases or contact with dust or oil may lead to chemical reactions that will adversely affect the device. If you use devices in such conditions, consider ways to prevent such exposure or to protect the devices.

4. Radiation, Including Cosmic Radiation

Most devices are not designed for environments involving exposure to radiation or cosmic radiation. Users should provide shielding as appropriate.

5. Smoke, Flame

**CAUTION:**

*Plastic molded devices are flammable, and therefore should not be used near combustible substances. If devices begin to smoke or burn, there is danger of the release of toxic gases.*

Customers considering the use of Cypress products in other special environmental conditions should consult with sales representatives.

## 13. Handling Devices

### Special Care is Required for the Following when Handling the Device:

- Latch-up prevention
- Unused pins handling
- External clock usage
- Notes on PLL clock mode operation
- Power supply pins ( $V_{CC}/V_{SS}$ )
- Crystal oscillator and ceramic resonator circuit
- Turn on sequence of power supply to A/D converter and analog inputs
- Pin handling when not using the A/D converter
- Notes on Power-on
- Stabilization of power supply voltage
- Serial communication
- Mode Pin (MD)

#### 13.1 Latch-Up Prevention

CMOS IC chips may suffer latch-up under the following conditions:

- A voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between  $V_{CC}$  pins and  $V_{SS}$  pins.
- The  $AV_{CC}$  power supply is applied before the  $V_{CC}$  voltage.

Latch-up may increase the power supply current dramatically, causing thermal damages to the device.

For the same reason, extra care is required to not let the analog power-supply voltage ( $AV_{CC}$ ,  $AV_{RH}$ ) exceed the digital power-supply voltage.

#### 13.2 Unused Pins Handling

Unused input pins can be left open when the input is disabled (corresponding bit of Port Input Enable register  $PIER = 0$ ).

Leaving unused input pins open when the input is enabled may result in misbehavior and possible permanent damage of the device. To prevent latch-up, they must therefore be pulled up or pulled down through resistors which should be more than  $2k\Omega$ .

Unused bidirectional pins can be set either to the output state and be then left open, or to the input state with either input disabled or external pull-up/pull-down resistor as described above.

#### 13.3 External Clock Usage

The permitted frequency range of an external clock depends on the oscillator type and configuration.

See

AC Characteristics for detailed modes and frequency limits. Single and opposite phase external clocks must be connected as follows:

**13.3.1 Single Phase External Clock for Main Oscillator**

When using a single phase external clock for the Main oscillator, X0 pin must be driven and X1 pin left open. And supply 1.8V power to the external clock.

**13.3.2 Single Phase External Clock for Sub Oscillator**

When using a single phase external clock for the Sub oscillator, “External clock mode” must be selected and X0A/P04\_0 pin must be driven. X1A/P04\_1 pin can be configured as GPIO.

**13.3.3 Opposite Phase External Clock**

When using an opposite phase external clock, X1 (X1A) pins must be supplied with a clock signal which has the opposite phase to the X0 (X0A) pins. Supply level on X0 and X1 pins must be 1.8V.

**13.4 Notes on PLL Clock Mode Operation**

If the microcontroller is operated with PLL clock mode and no external oscillator is operating or no external clock is supplied, the microcontroller attempts to work with the free oscillating PLL. Performance of this operation, however, cannot be guaranteed.

**13.5 Power Supply Pins (Vcc/Vss)**

It is required that all V<sub>CC</sub>-level as well as all V<sub>SS</sub>-level power supply pins are at the same potential. If there is more than one V<sub>CC</sub> or V<sub>SS</sub> level, the device may operate incorrectly or be damaged even within the guaranteed operating range.

V<sub>CC</sub> and V<sub>SS</sub> pins must be connected to the device from the power supply with lowest possible impedance.

The smoothing capacitor at V<sub>CC</sub> pin must use the one of a capacity value that is larger than C<sub>s</sub>.

Besides this, as a measure against power supply noise, it is required to connect a bypass capacitor of about 0.1μF between V<sub>CC</sub> and V<sub>SS</sub> pins as close as possible to V<sub>CC</sub> and V<sub>SS</sub> pins.

**13.6 Crystal Oscillator and ceramic resonator Circuit**

Noise at X0, X1 pins or X0A, X1A pins might cause abnormal operation. It is required to provide bypass capacitors with shortest possible distance to X0, X1 pins and X0A, X1A pins, crystal oscillator (or ceramic resonator) and ground lines, and, to the utmost effort, that the lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board art work surrounding X0, X1 pins and X0A, X1A pins with a ground area for stabilizing the operation.

It is highly recommended to evaluate the quartz/MCU or resonator/MCU system at the quartz or resonator manufacturer, especially when using low-Q resonators at higher frequencies.

### 13.7 Turn on Sequence of Power Supply to A/D Converter and Analog Inputs

It is required to turn the A/D converter power supply ( $AV_{CC}$ ,  $AVRH$ ) and analog inputs ( $ANn$ ) on after turning the digital power supply ( $V_{CC}$ ) on.

It is also required to turn the digital power off after turning the A/D converter supply and analog inputs off. In this case,  $AVRH$  must not exceed  $AV_{CC}$ . Input voltage for ports shared with analog input ports also must not exceed  $AV_{CC}$  (turning the analog and digital power supplies simultaneously on or off is acceptable).

### 13.8 Pin Handling when Not Using the A/D Converter

If the A/D converter is not used, the power supply pins for A/D converter should be connected such as  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AVRH = V_{SS}$ .

### 13.9 Notes on Power-on

To prevent malfunction of the internal voltage regulator, supply voltage profile while turning the power supply on should be slower than 50 $\mu$ s from 0.2V to 2.7V.

### 13.10 Stabilization of Power Supply Voltage

If the power supply voltage varies acutely even within the operation safety range of the  $V_{CC}$  power supply voltage, a malfunction may occur. The  $V_{CC}$  power supply voltage must therefore be stabilized. As stabilization guidelines, the power supply voltage must be stabilized in such a way that  $V_{CC}$  ripple fluctuations (peak to peak value) in the commercial frequencies (50Hz to 60Hz) fall within 10% of the standard  $V_{CC}$  power supply voltage and the transient fluctuation rate becomes 0.1V/ $\mu$ s or less in instantaneous fluctuation for power supply switching.

### 13.11 Serial Communication

There is a possibility to receive wrong data due to noise or other causes on the serial communication.

Therefore, design a printed circuit board so as to avoid noise.

Consider receiving of wrong data when designing the system. For example apply a checksum and retransmit the data if an error occurs.

### 13.12 Mode Pin (MD)

Connect the mode pin directly to  $V_{CC}$  or  $V_{SS}$  pin. To prevent the device unintentionally entering test mode due to noise, lay out the printed circuit board so as to minimize the distance from the mode pin to  $V_{CC}$  or  $V_{SS}$  pin and provide a low-impedance connection.

## 14. Electrical Characteristics

### 14.1 Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating		Unit	Remarks
			Min	Max		
Power supply voltage <sup>[1]</sup>	$V_{CC}$	-	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
Analog power supply voltage <sup>[1]</sup>	$AV_{CC}$	-	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC}$ <sup>[2]</sup>
Analog reference voltage <sup>[1]</sup>	AVRH	-	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AVRH$ , $AVRH \geq AV_{SS}$
Input voltage <sup>[1]</sup>	$V_I$	-	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_I \leq V_{CC} + 0.3V$ <sup>[3]</sup>
Output voltage <sup>[1]</sup>	$V_O$	-	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_O \leq V_{CC} + 0.3V$ <sup>[3]</sup>
Maximum Clamp Current	$I_{CLAMP}$	-	-4.0	+4.0	mA	Applicable to general purpose I/O pins <sup>[4]</sup>
Total Maximum Clamp Current	$\sum  I_{CLAMP} $	-	-	13	mA	Applicable to general purpose I/O pins <sup>[4]</sup>
"L" level maximum output current	$I_{OL}$	-	-	15	mA	
"L" level average output current	$I_{OLAV}$	-	-	4	mA	
"L" level maximum overall output current	$\sum I_{OL}$	-	-	32	mA	
"L" level average overall output current	$\sum I_{OLAV}$	-	-	16	mA	
"H" level maximum output current	$I_{OH}$	-	-	-15	mA	
"H" level average output current	$I_{OHAV}$	-	-	-4	mA	
"H" level maximum overall output current	$\sum I_{OH}$	-	-	-32	mA	
"H" level average overall output current	$\sum I_{OHAV}$	-	-	-16	mA	
Power consumption <sup>[5]</sup>	$P_D$	$T_A = +125^\circ\text{C}$	-	284 <sup>[6]</sup>	mW	
Operating ambient temperature	$T_A$	-	-40	+125 <sup>[7]</sup>	°C	
Storage temperature	$T_{STG}$	-	-55	+150	°C	

[1]: This parameter is based on  $V_{SS} = AV_{SS} = 0V$ .

[2]:  $AV_{CC}$  and  $V_{CC}$  must be set to the same voltage. It is required that  $AV_{CC}$  does not exceed  $V_{CC}$  and that the voltage at the analog inputs does not exceed  $AV_{CC}$  when the power is switched on.

[3]:  $V_I$  and  $V_O$  should not exceed  $V_{CC} + 0.3V$ .  $V_I$  should also not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the  $I_{CLAMP}$  rating supersedes the  $V_I$  rating. Input/Output voltages of standard ports depend on  $V_{CC}$ .

[4]:

- Applicable to all general purpose I/O pins (Pnn\_m).
- Use within recommended operating conditions.
- Use at DC voltage (current).
- The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
- The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.

- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the VCC pin, and this may affect other devices.
- Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0V), the power supply is provided from the pins, so that incomplete operation may result.
- Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the Power reset.
- The DEBUG I/F pin has only a protective diode against VSS. Hence it is only permitted to input a negative clamping current (4mA). For protection against positive input voltages, use an external clamping diode which limits the input voltage to maximum 6.0V.

Sample recommended circuits:

[5]: The maximum permitted power dissipation depends on the ambient temperature, the air flow velocity and the thermal conductance of the package on the PCB.

The actual power dissipation depends on the customer application and can be calculated as follows:

$$P_D = P_{IO} + P_{INT}$$

$$P_{IO} = \sum (V_{OL} \times I_{OL} + V_{OH} \times I_{OH}) \text{ (I/O load power dissipation, sum is performed on all I/O ports)}$$

$$P_{INT} = V_{CC} \times (I_{CC} + I_A) \text{ (internal power dissipation)}$$

$I_{CC}$  is the total core current consumption into  $V_{CC}$  as described in the "DC characteristics" and depends on the selected operation mode and clock frequency and the usage of functions like Flash programming.

$I_A$  is the analog current consumption into  $AV_{CC}$ .

[6]: Worst case value for a package mounted on single layer PCB at specified  $T_A$  without air flow.

[7]: Write/erase to a large sector in flash memory is warranted with  $T_A \leq +105^\circ\text{C}$ .

**WARNING:**

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 14.2 Recommended Operating Conditions

( $V_{SS} = AV_{SS} = 0V$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	$V_{CC}, AV_{CC}$	2.7	-	5.5	V	
		2.0	-	5.5	V	Maintains RAM data in stop mode
Smoothing capacitor at C pin	$C_S$	0.5	1.0 to 3.9	4.7	$\mu F$	1.0 $\mu F$ (Allowance within $\pm 50\%$ ) 3.9 $\mu F$ (Allowance within $\pm 20\%$ ) Please use the ceramic capacitor or the capacitor of the frequency response of this level. The smoothing capacitor at $V_{CC}$ must use the one of a capacity value that is larger than $C_S$ .

### WARNING:

The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure. No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

14.3 DC Characteristics

[1]: The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator. See chapter "Standby mode and voltage regulator control circuit" of the Hardware Manual for further details about voltage regulator control. Current for "On Chip Debugger" part is not included. Power supply current in Run mode does not include Flash Write / Erase current.

[2]: The power supply current in Timer mode is the value when Flash is in Power-down / reset mode.

When Flash is not in Power-down / reset mode, I<sub>CCFLASHPD</sub> must be added to the Power supply current.

The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator. The current for "On Chip Debugger" part is not included.

[3]: The power supply current in Stop mode is the value when Flash is in Power-down / reset mode.

When Flash is not in Power-down / reset mode, I<sub>CCFLASHPD</sub> must be added to the Power supply current.

[4]: When low voltage detector is enabled, I<sub>CCCLVD</sub> must be added to Power supply current.

[5]: When Flash Write / Erase program is executed, I<sub>CCFLASH</sub> must be added to Power supply current.

## 14.4 AC Characteristics

### 14.4.1 Main Clock Input Characteristics

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_D = 1.8V \pm 0.15V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^\circ C$  to  $+125^\circ C$ )

Parameter	Symbol	Pin Name	Value			Unit	Remarks
			Min	Typ	Max		
Input frequency	$f_C$	X0, X1	4	-	8	MHz	When using a crystal oscillator, PLL off
			-	-	8	MHz	When using an opposite phase external clock, PLL off
			4	-	8	MHz	When using a crystal oscillator or opposite phase external clock, PLL on
Input frequency	$f_{FCI}$	X0	-	-	8	MHz	When using a single phase external clock in "Fast Clock Input mode", PLL off
			4	-	8	MHz	When using a single phase external clock in "Fast Clock Input mode", PLL on
Input clock cycle	$t_{CYLH}$	-	125	-	-	ns	
Input clock pulse width	$P_{WH}, P_{WL}$	-	55	-	-	ns	

When using the crystal oscillator

The amplitude changes by resistance, capacity which added outside or the difference of the device.

When using the external clock

14.4.2 Sub Clock Input Characteristics

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Pin Name	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
Input frequency	$f_{CL}$	X0A, X1A	-	-	32.768	-	kHz	When using an oscillation circuit
			-	-	-	100	kHz	When using an opposite phase external clock
		X0A	-	-	-	50	kHz	When using a single phase external clock
Input clock cycle	$t_{CYLL}$	-	-	10	-	-	$\mu s$	
Input clock pulse width	-	-	$P_{WH}/t_{CYLL}$ , $P_{WL}/t_{CYLL}$	30	-	70	%	

**14.4.3 Built-in RC Oscillation Characteristics**

 ( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Clock frequency	$f_{RC}$	50	100	200	kHz	When using slow frequency of RC oscillator
		1	2	4		MHz
RC clock stabilization time	$t_{RCSTAB}$	80	160	320	$\mu s$	When using slow frequency of RC oscillator (16 RC clock cycles)
		64	128	256		$\mu s$

**14.4.4 Internal Clock Timing**

 ( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Value		Unit
		Min	Max	
Internal System clock frequency (CLKS1 and CLKS2)	$f_{CLKS1}, f_{CLKS2}$	-	54	MHz
Internal CPU clock frequency (CLKB), Internal peripheral clock frequency (CLKP1)	$f_{CLKB}, f_{CLKP1}$	-	32	MHz
Internal peripheral clock frequency (CLKP2)	$f_{CLKP2}$	-	32	MHz

**14.4.5 Operating Conditions of PLL**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
PLL oscillation stabilization wait time	$t_{LOCK}$	1	-	4	ms	For CLKMC = 4MHz
PLL input clock frequency	$f_{PLLI}$	4	-	8	MHz	
PLL oscillation clock frequency	$f_{CLKVCO}$	56	-	108	MHz	Permitted VCO output frequency of PLL (CLKVCO)
PLL phase jitter	$t_{PSKEW}$	-5	-	+5	ns	For CLKMC (PLL input clock) $\geq 4MHz$

**14.4.6 Reset Input**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Pin Name	Value		Unit
			Min	Max	
Reset input time	$t_{RSTL}$	RSTX	10	-	$\mu s$
Rejection of reset input time			1	-	$\mu s$

**14.4.7 Power-on Reset Timing**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Pin Name	Value			Unit
			Min	Typ	Max	
Power on rise time	$t_R$	V <sub>CC</sub>	0.05	-	30	ms
Power off time	$t_{OFF}$	V <sub>CC</sub>	1	-	-	ms

**14.4.8 USART Timing**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ ,  $C_L = 50pF$ )

Parameter	Symbol	Pin name	Conditions	$4.5V \leq V_{CC} < 5.5V$		$2.7V \leq V_{CC} < 4.5V$		Unit
				Min	Max	Min	Max	
Serial clock cycle time	$t_{SCYC}$	SCKn	Internal shift clock mode	$4t_{CLKP1}$	-	$4t_{CLKP1}$	-	ns
SCK ↓ → SOT delay time	$t_{SLOVI}$	SCKn, SOTn		- 20	+ 20	- 30	+ 30	ns
SOT → SCK ↑ delay time	$t_{OVSHI}$	SCKn, SOTn		$Nxt_{CLKP1} - 20^*$	-	$Nxt_{CLKP1} - 30^*$	-	ns
SIN → SCK ↑ setup time	$t_{IVSHI}$	SCKn, SINn		$t_{CLKP1} + 45$	-	$t_{CLKP1} + 55$	-	ns
SCK ↑ → SIN hold time	$t_{SHIXI}$	SCKn, SINn		0	-	0	-	ns
Serial clock "L" pulse width	$t_{LSLH}$	SCKn	External shift clock mode	$t_{CLKP1} + 10$	-	$t_{CLKP1} + 10$	-	ns
Serial clock "H" pulse width	$t_{SHSL}$	SCKn		$t_{CLKP1} + 10$	-	$t_{CLKP1} + 10$	-	ns
SCK ↓ → SOT delay time	$t_{SLOVE}$	SCKn, SOTn		-	$2t_{CLKP1} + 45$	-	$2t_{CLKP1} + 55$	ns
SIN → SCK ↑ setup time	$t_{IVSHE}$	SCKn, SINn		$t_{CLKP1}/2 + 10$	-	$t_{CLKP1}/2 + 10$	-	ns
SCK ↑ → SIN hold time	$t_{SHIXE}$	SCKn, SINn		$t_{CLKP1} + 10$	-	$t_{CLKP1} + 10$	-	ns
SCK fall time	$t_F$	SCKn		-	20	-	20	ns
SCK rise time	$t_R$	SCKn		-	20	-	20	ns

**Notes:**

- AC characteristic in CLK synchronized mode
- $C_L$  is the load capacity value of pins when testing.
- Depending on the used machine clock frequency, the maximum possible baud rate can be limited by some parameters. These parameters are shown in "CY96600 series HARDWARE MANUAL".
- $t_{CLKP1}$  indicates the peripheral clock 1 (CLKP1), Unit: ns  
These characteristics only guarantee the same relocate port number.

For example, the combination of SCKn and SOTn\_R is not guaranteed.

\*: Parameter N depends on  $t_{SCYC}$  and can be calculated as follows:

- If  $t_{SCYC} = 2 \times k \times t_{CLKP1}$ , then  $N = k$ , where k is an integer > 2
- If  $t_{SCYC} = (2 \times k + 1) \times t_{CLKP1}$ , then  $N = k + 1$ , where k is an integer > 1

Examples:

$t_{SCYC}$	N
$4 \times t_{CLKP1}$	2
$5 \times t_{CLKP1}, 6 \times t_{CLKP1}$	3
$7 \times t_{CLKP1}, 8 \times t_{CLKP1}$	4

**14.4.9 External Input Timing**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Pin Name	Value		Unit	Remarks
			Min	Max		
Input pulse width	$t_{INH}, t_{INL}$	Pnn_m	$2t_{CLKP1} + 200$ $(t_{CLKP1}=1/f_{CLKP1})^*$	-	ns	General Purpose I/O
		ADTG_R				A/D Converter trigger input
		TINn				Reload Timer
		TTGn				PPG trigger input
		INn				Input Capture
		AINn, BINn, ZINn				Quadrature Position/Revolution Counter
		INTn, INTn_R, INTn_R1	200	-	ns	External Interrupt
		NMI				Non-Maskable Interrupt

\*:  $t_{CLKP1}$  indicates the peripheral clock1 (CLKP1) cycle time except stop when in stop mode.

**14.5 A/D Converter**
**14.5.1 Electrical Characteristics for the A/D Converter**
 $(V_{CC} = AV_{CC} = 2.7V \text{ to } 5.5V, V_{SS} = AV_{SS} = 0V, T_A = -40^{\circ}C \text{ to } +125^{\circ}C)$

\*: Time for each channel.

**14.5.2 Accuracy and Setting of the A/D Converter Sampling Time**

If the external impedance is too high or the sampling time too short, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting the A/D conversion precision.

To satisfy the A/D conversion precision, a sufficient sampling time must be selected. The required sampling time ( $T_{\text{samp}}$ ) depends on the external driving impedance  $R_{\text{ext}}$ , the board capacitance of the A/D converter input pin  $C_{\text{ext}}$  and the  $AV_{\text{CC}}$  voltage level. The following replacement model can be used for the calculation:

$R_{\text{ext}}$ : External driving impedance

$C_{\text{ext}}$ : Capacitance of PCB at A/D converter input

$C_{\text{VIN}}$ : Analog input capacity (I/O, analog switch and ADC are contained)

$R_{\text{VIN}}$ : Analog input impedance (I/O, analog switch and ADC are contained)

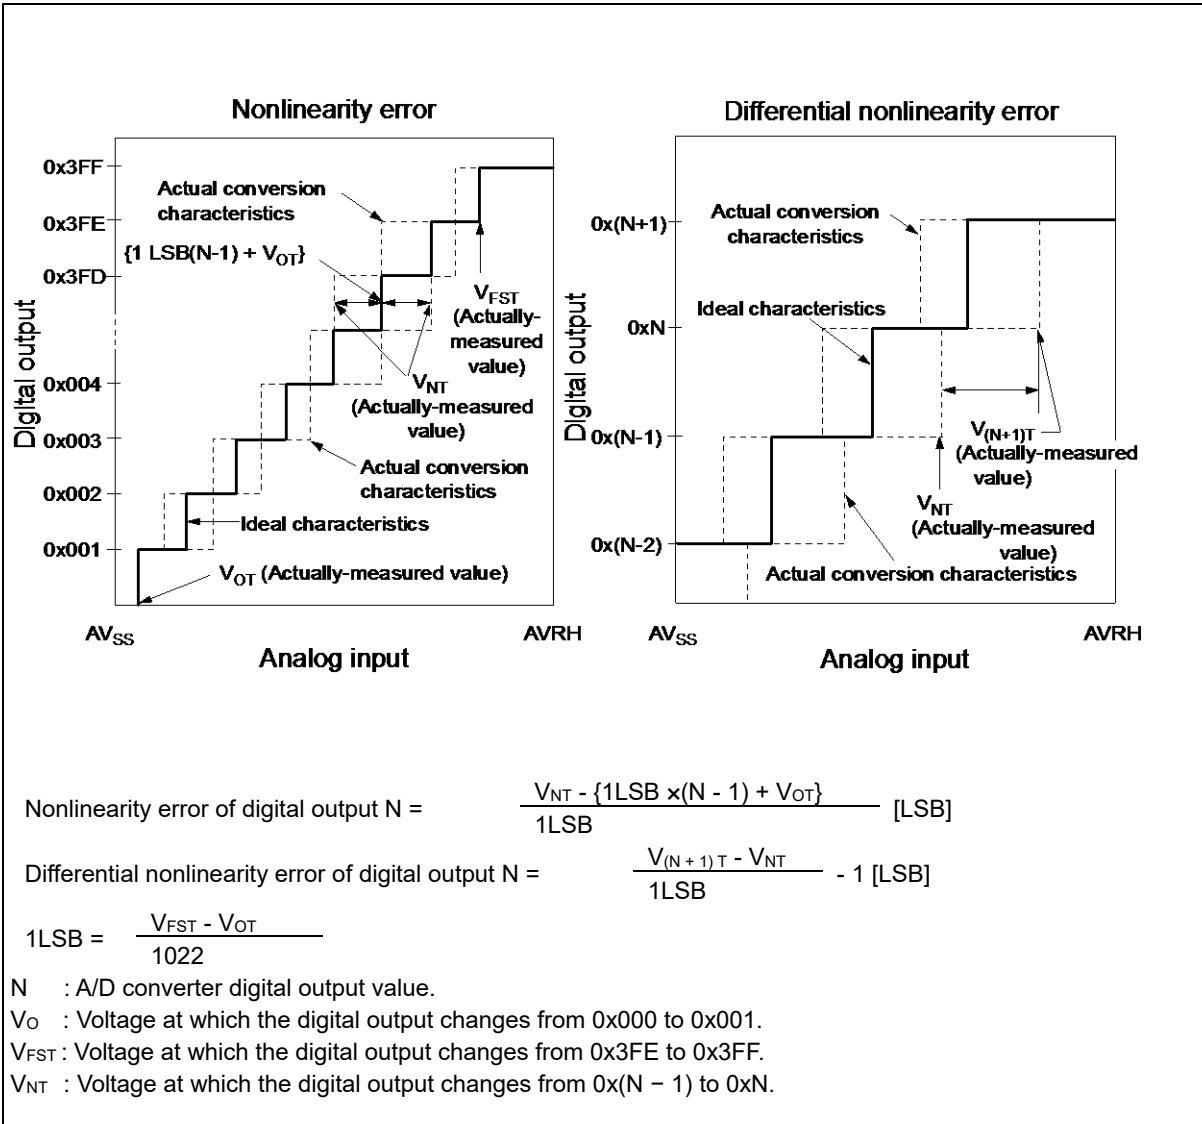

The following approximation formula for the replacement model above can be used:

$$T_{\text{samp}} = 7.62 \times (R_{\text{ext}} \times C_{\text{ext}} + (R_{\text{ext}} + R_{\text{VIN}}) \times C_{\text{VIN}})$$

- Do not select a sampling time below the absolute minimum permitted value. (0.5 $\mu\text{s}$  for  $4.5\text{V} \leq AV_{\text{CC}} \leq 5.5\text{V}$ , 1.2 $\mu\text{s}$  for  $2.7\text{V} \leq AV_{\text{CC}} < 4.5\text{V}$ )
- If the sampling time cannot be sufficient, connect a capacitor of about 0.1 $\mu\text{F}$  to the analog input pin.
- A big external driving impedance also adversely affects the A/D conversion precision due to the pin input leakage current  $I_{\text{IL}}$  (static current before the sampling switch) or the analog input leakage current  $I_{\text{AIN}}$  (total leakage current of pin input and comparator during sampling). The effect of the pin input leakage current  $I_{\text{IL}}$  cannot be compensated by an external capacitor.
- The accuracy gets worse as  $|AV_{\text{RH}} - AV_{\text{SS}}|$  becomes smaller.

**14.5.3 Definition of A/D Converter Terms**

- Resolution : Analog variation that is recognized by an A/D converter.
- Nonlinearity error : Deviation of the actual conversion characteristics from a straight line that connects the zero transition point (0b0000000000  $\longleftrightarrow$  0b0000000001) to the full-scale transition point (0b1111111110  $\longleftrightarrow$  0b1111111111).
- Differential nonlinearity error : Deviation from the ideal value of the input voltage that is required to change the output code by 1LSB.
- Total error : Difference between the actual value and the theoretical value. The total error includes zero transition error, full-scale transition error and nonlinearity error.
- Zero transition voltage: Input voltage which results in the minimum conversion value.
- Full scale transition voltage: Input voltage which results in the maximum conversion value.

$$1\text{LSB (Ideal value)} = \frac{\text{AVRH} - \text{AVSS}}{1024} \text{ [V]}$$

$$\text{Total error of digital output N} = \frac{V_{\text{NT}} - \{1\text{LSB} \times (\text{N} - 1) + 0.5\text{LSB}\}}{1\text{LSB}}$$

N : A/D converter digital output value.

V<sub>NT</sub> : Voltage at which the digital output changes from 0x(N + 1) to 0xN.

V<sub>OT</sub> (Ideal value) = AV<sub>SS</sub> + 0.5LSB[V]

V<sub>FST</sub> (Ideal value) = AV<sub>RH</sub> - 1.5LSB[V]

**14.6 Low Voltage Detection Function Characteristics**

( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter	Symbol	Conditions	Value			Unit
			Min	Typ	Max	
Detected voltage <sup>[1]</sup>	$V_{DL0}$	CILCR:LVL = 0000 <sub>B</sub>	2.70	2.90	3.10	V
	$V_{DL1}$	CILCR:LVL = 0001 <sub>B</sub>	2.79	3.00	3.21	V
	$V_{DL2}$	CILCR:LVL = 0010 <sub>B</sub>	2.98	3.20	3.42	V
	$V_{DL3}$	CILCR:LVL = 0011 <sub>B</sub>	3.26	3.50	3.74	V
	$V_{DL4}$	CILCR:LVL = 0100 <sub>B</sub>	3.45	3.70	3.95	V
	$V_{DL5}$	CILCR:LVL = 0111 <sub>B</sub>	3.73	4.00	4.27	V
	$V_{DL6}$	CILCR:LVL = 1001 <sub>B</sub>	3.91	4.20	4.49	V
Power supply voltage change rate <sup>[2]</sup>	$dV/dt$	-	- 0.004	-	+ 0.004	V/ $\mu$ s
Hysteresis width	$V_{HYS}$	CILCR:L VHYS=0	-	-	50	mV
		CILCR:L VHYS=1	80	100	120	mV
Stabilization time	$T_{LVDSTAB}$	-	-	-	75	$\mu$ s
Detection delay time	$t_d$	-	-	-	30	$\mu$ s

[1]: If the power supply voltage fluctuates within the time less than the detection delay time ( $t_d$ ), there is a possibility that the low voltage detection will occur or stop after the power supply voltage passes the detection range.

[2]: In order to perform the low voltage detection at the detection voltage ( $V_{DLX}$ ), be sure to suppress fluctuation of the power supply voltage within the limits of the change ration of power supply voltage.

**14.7 Flash Memory Write/Erase Characteristics**

 ( $V_{CC} = AV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ )

Parameter		Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Sector erase time	Large Sector	$T_A \leq +105^{\circ}C$	-	1.6	7.5	s	Includes write time prior to internal erase.
	Small Sector	-	-	0.4	2.1	s	
	Security Sector	-	-	0.31	1.65	s	
Word (16-bit) write time	Large Sector	$T_A \leq +105^{\circ}C$	-	25	400	$\mu s$	Not including system-level overhead time.
	Small Sector	-	-	25	400	$\mu s$	
Chip erase time		$T_A \leq +105^{\circ}C$	-	5.11	25.05	s	Includes write time prior to internal erase.

**Note:**

While the Flash memory is written or erased, shutdown of the external power ( $V_{CC}$ ) is prohibited. In the application system where the external power ( $V_{CC}$ ) might be shut down while writing or erasing, be sure to turn the power off by using a low voltage detection function.

To put it concrete, change the external power in the range of change ration of power supply voltage ( $-0.004V/\mu s$  to  $+0.004V/\mu s$ ) after the external power falls below the detection voltage ( $V_{DLX}$ )<sup>1</sup>.

Write/Erase cycles and data hold time

Write/Erase Cycles (Cycle)	Data Hold Time (Year)
1,000	20 <sup>[2]</sup>
10,000	10 <sup>[2]</sup>
100,000	5 <sup>[2]</sup>

[1]: See "14.6 Low Voltage Detection Function Characteristics".

[2]: This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at  $+85^{\circ}C$ ).

## 15. Example Characteristics

This characteristic is an actual value of the arbitrary sample. It is not the guaranteed value.

#### NOTES

- ALL DIMENSIONS ARE IN MILLIMETERS.
- DATUM PLANE H IS LOCATED AT THE BOTTOM OF THE MOLD PARTING LINE COINCIDENT WITH WHERE THE LEAD EXITS THE BODY.
- DATUMS A-B AND D TO BE DETERMINED AT DATUM PLANE H.
- TO BE DETERMINED AT SEATING PLANE C.
- DIMENSIONS D1 AND E1 DO NOT INCLUDE MOLD PROTRUSION. ALLOWABLE PROTRUSION IS 0.25mm PRE SIDE. DIMENSIONS D1 AND E1 INCLUDE MOLD MISMATCH AND ARE DETERMINED AT DATUM PLANE H.
- DETAILS OF PIN 1 IDENTIFIER ARE OPTIONAL BUT MUST BE LOCATED WITHIN THE ZONE INDICATED.
- REGARDLESS OF THE RELATIVE SIZE OF THE UPPER AND LOWER BODY SECTIONS. DIMENSIONS D1 AND E1 ARE DETERMINED AT THE LARGEST FEATURE OF THE BODY EXCLUSIVE OF MOLD FLASH AND GATE BURRS. BUT INCLUDING ANY MISMATCH BETWEEN THE UPPER AND LOWER SECTIONS OF THE MOLDER BODY.
- DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. THE DAMBAR PROTRUSION (S) SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED b MAXIMUM BY MORE THAN 0.08mm. DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OR THE LEAD FOOT.
- THESE DIMENSIONS APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.10mm AND 0.25mm FROM THE LEAD TIP.
- A1 IS DEFINED AS THE DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT OF THE PACKAGE BODY.

## 18. Major Changes

Spancion Publication Number: MB96610\_DS704-00007

Page	Section	Change Results
Revision 3.0		
4	■FEATURES	Changed the description of "External Interrupts" Interrupt mask and pending bit per channel Interrupt mask bit per channel
23 to 26	■HANDLING PRECAUTIONS	Added a section
34	■ELECTRICAL CHARACTERISTICS 3. DC Characteristics (1) Current Rating	Changed the Conditions for I <sub>CCSRCH</sub> CLKS1/2 = CLKB = CLKP1/2 = CLKRC = 2MHz, CLKS1/2 = CLKP1/2 = CLKRC = 2MHz,
		Changed the Conditions for I <sub>CCSRCL</sub> CLKS1/2 = CLKB = CLKP1/2 = CLKRC = 100kHz CLKS1/2 = CLKP1/2 = CLKRC = 100kHz
35		Changed the Conditions for I <sub>CCTPLL</sub> PLL Timer mode with CLKP1 = 32MHz PLL Timer mode with CLKPLL = 32MHz
		Changed the Value of "Power supply current in Timer modes" I <sub>CCTPLL</sub> Typ: 2480µA → 1800µA (T <sub>A</sub> = +25°C) Max: 2710µA → 2245µA (T <sub>A</sub> = +25°C) Max: 3985µA → 3165µA (T <sub>A</sub> = +105°C) Max: 4830µA → 3975µA (T <sub>A</sub> = +125°C)
36		Changed the annotation *2 Power supply for "On Chip Debugger" part is not included. Power supply current in Run mode does not include Flash Write / Erase current. The current for "On Chip Debugger" part is not included.
47	5. A/D Converter (2) Accuracy and Setting of the A/D Converter Sampling Time	Deleted the unit "[Min]" from approximation formula of Sampling time
52	7. Flash Memory Write/Erase Characteristics	Changed the condition (V <sub>CC</sub> = AV <sub>CC</sub> = 2.7V to 5.5V, V <sub>D</sub> =1.8V±0.15V, V <sub>SS</sub> = AV <sub>SS</sub> = 0V, T <sub>A</sub> = - 40°C to + 125°C) (V <sub>CC</sub> = AV <sub>CC</sub> = 2.7V to 5.5V, V <sub>SS</sub> = AV <sub>SS</sub> = 0V, T <sub>A</sub> = - 40°C to + 125°C)

Page	Section	Change Results
52	■ELECTRICAL CHARACTERISTICS 7. Flash Memory Write/Erase Characteristics	Changed the Note While the Flash memory is written or erased, shutdown of the external power ( $V_{CC}$ ) is prohibited. In the application system where the external power ( $V_{CC}$ ) might be shut down while writing, be sure to turn the power off by using an external voltage detector. While the Flash memory is written or erased, shutdown of the external power ( $V_{CC}$ ) is prohibited. In the application system where the external power ( $V_{CC}$ ) might be shut down while writing or erasing, be sure to turn the power off by using a low voltage detection function.

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you a personal, non-exclusive, nontransferable license (without the right to sublicense) (1) under its copyright rights in the Software (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units, and (2) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely for use with Cypress hardware products. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. No computing device can be absolutely secure. Therefore, despite security measures implemented in Cypress hardware or software products, Cypress shall have no liability arising out of any security breach, such as unauthorized access to or use of a Cypress product. CYPRESS DOES NOT REPRESENT, WARRANT, OR GUARANTEE THAT CYPRESS PRODUCTS, OR SYSTEMS CREATED USING CYPRESS PRODUCTS, WILL BE FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION (collectively, "Security Breach"). Cypress disclaims any liability relating to any Security Breach, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any Security Breach. In addition, the products described in these materials may contain design defects or errors known as errata which may cause the product to deviate from published specifications. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. "High-Risk Device" means any device or system whose failure could cause personal injury, death, or property damage. Examples of High-Risk Devices are weapons, nuclear installations, surgical implants, and other medical devices. "Critical Component" means any component of a High-Risk Device whose failure to perform can be reasonably expected to cause, directly or indirectly, the failure of the High-Risk Device, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any use of a Cypress product as a Critical Component in a High-Risk Device. You shall indemnify and hold Cypress, its directors, officers, employees, agents, affiliates, distributors, and assigns harmless from and against all claims, costs, damages, and expenses, arising out of any claim, including claims for product liability, personal injury or death, or property damage arising from any use of a Cypress product as a Critical Component in a High-Risk Device. Cypress products are not intended or authorized for use as a Critical Component in any High-Risk Device except to the limited extent that (i) Cypress's published data sheet for the product explicitly states Cypress has qualified the product for use in a specific High-Risk Device, or (ii) Cypress has given you advance written authorization to use the product as a Critical Component in the specific High-Risk Device and you have signed a separate indemnification agreement.

Cypress, the Cypress logo, Spansion, the Spansion logo, and combinations thereof, WICED, PSoC, CapSense, EZ-USB, F-RAM, and Traveo are trademarks or registered trademarks of Cypress in the United States and other countries.
