

Compatibility: gateron, keilix, cherry mx, regular (not mid or compact height).
5 pin switch preferred (PCB mount type)

LED:
- 1.8mm round
- 2x3x4mm rectangle (fit ok on keilix PCB but needed trimming for clear panel mount type)

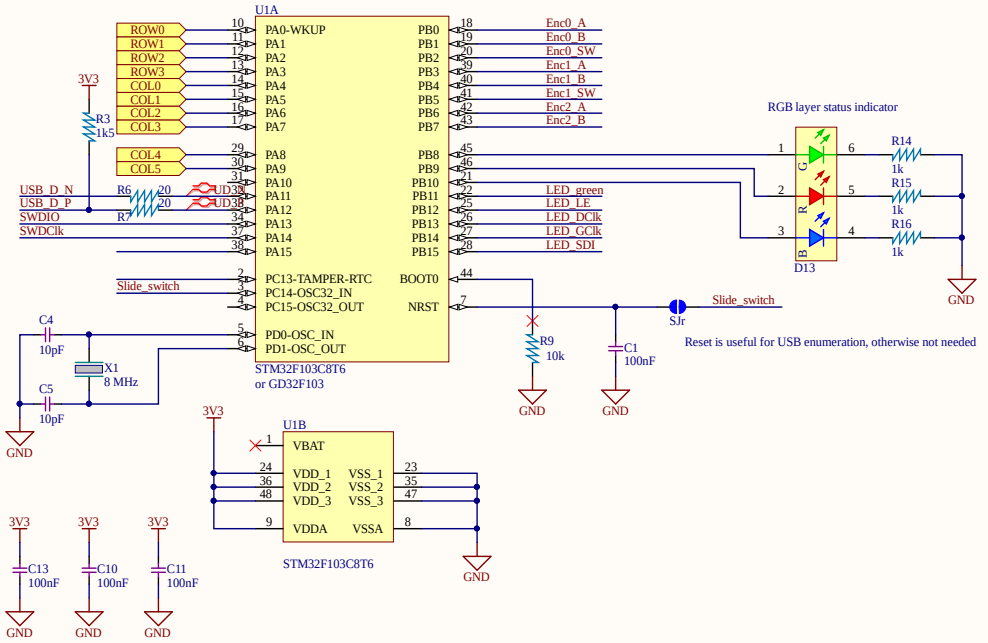

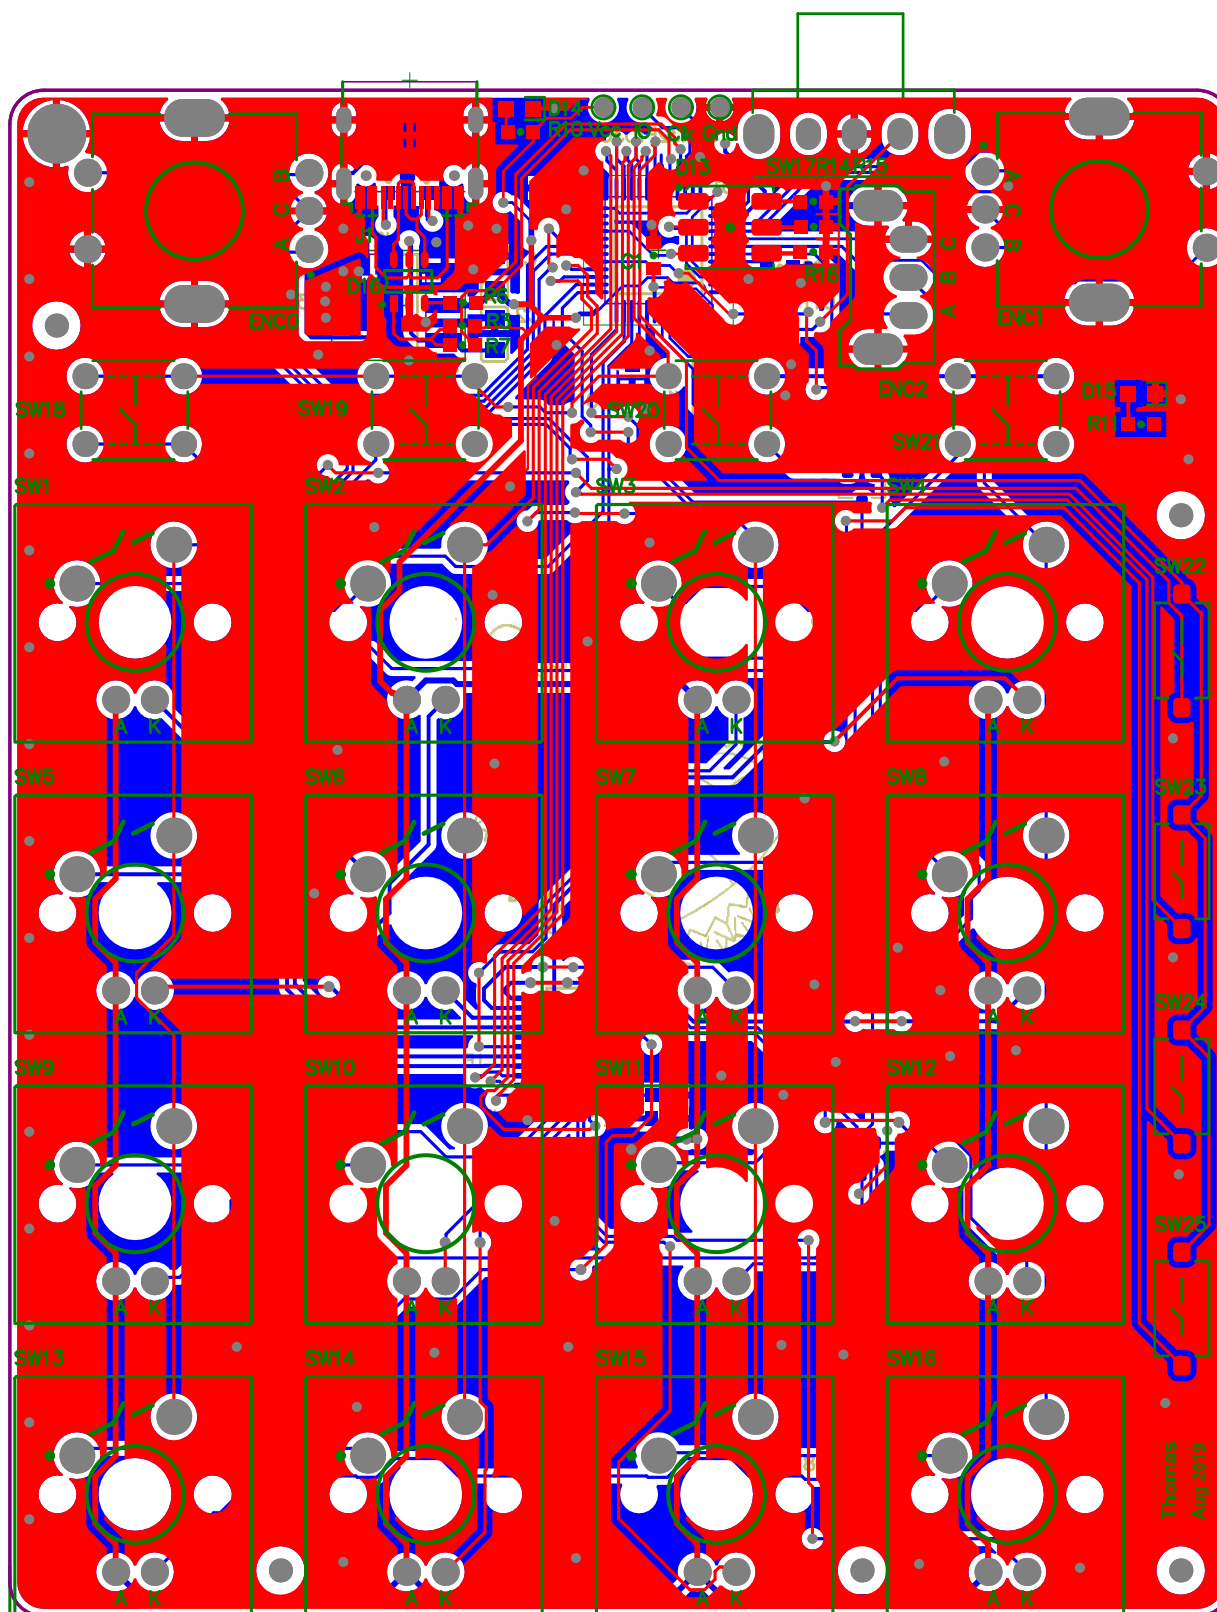

Can have:
- volume, push to mute
- two other dials with smaller size

shortcuts:
- copy paste?
- rotate?
could light up LED when copy/cut then turn off after paste

$V_{\text{rest}} = 0.61V \cdot G$
 $I_{\text{out}} = (V_{\text{rest}} / R_{\text{ext}}) \cdot 23$
 $P_d = 1.6W$

Normal LED is at the top of the switch,
 but if only clear used doesnt really matter
