

# CROWN HEAD BAND \*\* WEARABLE TECH PROJECT #1

These clips act as a switch.
When connected, it brings power from the battery to the lights!

Conductive Fabric tape acts as the wires of this project.

### STEP 1

Use a tape measure to measure your head. Cut a strip of fabric the same length to make sure it fits around your head. Add notches and shapes to make it look like a crown!

Lay out the LED strips and battery in your desired spot. Use more conductive tape to secure these in place.

## STEP 2

Lay down the conductive tape into rails that will connect to the LEDs and to the battery.

# STEP 4

Touch the ends of the battery tape against the LED Strip connected tape to test the circuit. The lights should come on.

### STEP 5

Hand stitch or hammer in the snap fastners in place to act as the switch in the circuit. Finished!
